San Jose, USA · +1 (650) 772-8378 · poojadshah1999@gmail.com · linkedin.com/in/pooja-shah-3559441aa

PROFESSIONAL SUMMARY

MSBA candidate at Santa Clara University (Dec 2026) with 3+ years of analytics experience turning data into decisions for leadership teams. Skilled in SQL, Python, and Tableau, with hands-on machine learning, deep learning, and LLM work. Built a supplier risk analytics platform for Google's Supply Chain Risk team. Previously led an attrition analysis that cut 90-day turnover from 22% to 15%.

EDUCATION

Master of Science in Business Analytics · Santa Clara University · GPA: 3.7/4.0 — **Expected Dec 2026**

Master of Business Administration · Ahmedabad University — **2020 – 2022**

Bachelor of Business Administration · Ahmedabad University — **2017 – 2020**

TECHNICAL SKILLS

Programming: Python (pandas, NumPy, scikit-learn), SQL, R

Statistics & ML: Linear & logistic regression, random forest, classification, forecasting, hypothesis testing, Expectation-Maximization, NLP / text embeddings, deep learning

AI / LLMs: LLM applications (Gemini, Vertex AI), RAG, agentic workflows

BI & Visualization: Tableau, Power BI, Looker, Excel (Advanced)

Data & Cloud: BigQuery, Snowflake, PostgreSQL, GCP, ETL/ELT pipelines, FastAPI, Docker, Git

PROFESSIONAL EXPERIENCE

Practicum Research Analyst · *Alphabet (Google), Supply Chain Risk Management Team* — **Jan 2026 – May 2026**

- Built a daily-refresh supplier risk intelligence platform on GCP and Looker dashboards, monitoring 14 strategic suppliers across 6 risk categories using news, 5 years of SEC filings, and government screening data.
- Developed a semi-supervised Expectation-Maximization model (Naive Bayes mixture) that assigns each article a probability of being true supplier risk versus market noise or name-only mentions, filtering ~45% of incoming articles before analyst review.
- Applied NLP to unstructured news: Gemini for structured risk extraction and Vertex AI text embeddings with cosine-similarity clustering to group related articles into consolidated issues.
- Designed an explainable risk scoring model (likelihood × impact with floors and caps) and a what-if simulator for testing weighting assumptions, surfacing a major semiconductor supplier's export-control exposure as the top active risk.
- Built a human-in-the-loop labeling workflow that produced 30 analyst-confirmed labels as training data for future text classifiers.

Teaching Assistant, Business Analytics · *Santa Clara University, CA* — **Feb 2026 – Jun 2026**

- Supported 40+ graduate students in building interactive Tableau dashboards, teaching data connections, calculated fields, filters, and visualization best practices.
- Led lab sessions to troubleshoot dashboard and data issues, coaching students to turn raw datasets into clear, decision-ready insights for non-technical audiences.

Manager, HR & Analytics · *Linear Loop and Qable, Ahmedabad, India* — **Jan 2024 – Jan 2025**

- Led a 4-person analytics team delivering SQL- and Python-based analyses that informed business strategy and scaling decisions for leadership.
- Built a logistic regression model to identify drivers of early attrition (tenure, onboarding completion, engagement scores), informing the onboarding redesign that cut 90-day turnover from 22% to 15%.
- Built a data-driven testing playbook and KPI framework adopted across the organization to measure the impact of new initiatives.
- Analyzed employee engagement survey data and built retention dashboards that guided leadership's retention priorities.
- Automated recurring reporting with ETL pipelines and BI dashboards, saving **20 hours/week** of manual reporting.

Senior HR Analytics Executive · *Tatvic Analytics, Ahmedabad, India* — **Jan 2022 – Jan 2024**

- Forecast quarterly hiring needs using regression on historical headcount, attrition, and business growth data, enabling proactive hiring plans.
- Built SQL-powered KPI dashboards in Tableau used by senior leaders for workforce planning, hiring, and company-wide strategic decisions.
- Built machine learning models to predict employee attrition risk from historical HR data, helping HR prioritize retention conversations.
- Served as an internal analytics consultant to HR and business leaders, defining metrics and translating analysis into recommendations for DEI hiring and L&D initiatives.

PROJECTS

Analytics Showdown - Good Nature Agro Case Challenge · **Python, LLM/AI Agent Development, Tableau** — **May 2026**

- Completed a stakeholder-facing analytics consulting challenge for a social enterprise supporting African smallholder farmers, applying exploratory analysis, segmentation, and **KPI** evaluation to deliver data-backed strategic recommendations.

Tokenly - LLM Cost Optimization Tool · **PostgreSQL, Snowflake, Next.js, FastAPI, Docker** — **Apr 2026**

- Built an **LLM** cost-analytics dashboard analyzing per-request token use, latency, and cost to help product teams optimize model spend.

Bronco Health - AI Stress Prediction Platform · **Python, Machine Learning, GenAI, React.js** — **Jan 2026**

- Led the full **machine learning** product lifecycle: designed the analytics workflow, trained classification models for student stress-risk prediction, and shipped a self-service dashboard with wellness trends and personalized recommendations.
